

DRAFT Surveillance Testing Policy

Effective Date: TBA

Objective

The DLC Surveillance Testing Program actively monitors the validity of data and other information submitted to the DLC Solid-State Lighting QPL (SSL QPL) to protect the value of the QPL for all stakeholders. This policy outlines a process for selection of products from the QPL for additional testing and for verifying the claim of safety certification coverage. The DLC may seek to implement additional efforts toward these objectives in future policy development cycles.

Surveillance Testing Process

A. Product Selection

1. In order to maximize the use of limited resources, surveillance will focus primarily on identifying products with higher-than-average risk of non-compliance. The following criteria will be considered during the selection process to identify these products:
 - a. Products whose performance is close to meeting the tolerance of the Technical Requirements under which they were qualified (e.g. a Premium product will be evaluated against the Premium requirements).
 - b. Products whose performance greatly exceeds the Technical Requirements.
 - c. Listed products with past application issues, including, but not limited to, test reports with reporting issues that question the validity of the test data, supplemental documentation with issues that question the validity of the documentation, and indications of product misrepresentation.
 - d. Complaints from stakeholders, including DLC Members. Complaints from non-Members will require documentation before being considered as valid selection criteria.
 - e. Products of manufacturers that have chosen not to participate in the Surveillance Testing investigation after being selected in previous Surveillance Testing rounds (see section B.2.).

- 28 f. Products of manufacturers that have a history of failing results from previous
29 Surveillance Testing rounds.
- 30 g. Products randomly selected from the QPL.
- 31 2. The frequency and the number of products selected through the Surveillance Testing process
32 for each round of testing will be at the sole discretion of the DLC. Product selection may focus
33 on one of the criteria above or several. Regardless of the selection criteria, the metrics
34 reported in the testing will remain constant, depending on the type of test ordered
35 (integrating sphere/goniophotometer).
- 36 3. As always, manufacturers may voluntarily de-list their products from the QPL at any time
37 without penalty. With the Surveillance Testing program, this must occur *prior* to being
38 selected for testing to avoid potential consequences. Please e-mail
39 applications@designlights.org for more information on de-listing any of your organization's
40 products.
- 41 Manufacturers should factor in their product performance data and possible risk for failure to
42 determine if voluntarily removing products from the QPL prior to being selected is
43 appropriate. For example, products that qualified using tolerances to meet the Technical
44 Requirements may carry a higher risk of not meeting the Technical Requirements during
45 Surveillance Testing.
- 46 4. If a product and/or component necessary for testing is not available for procurement at the
47 time of selection (i.e. it is no longer for sale/manufactured), it will be considered declining to
48 participate. Exceptions will be made for made-to-order products. Products that are no longer
49 sold should be proactively removed from the QPL by the manufacturer.
- 50 5. Products cannot be subject to "double jeopardy". If a product has been tested and passes
51 through the Surveillance Testing program and has not been updated in any manner, it is
52 immune from being selected again.
- 53 6. Manufacturers who have three selections that all yield passing results within a calendar year
54 will have a temporary exemption from further selections. This temporary exemption lasts for
55 nine months and applies to the verification of product performance – not safety certification.

56 B. Notification to Selected Manufacturer

57 The DLC will notify the selected manufacturer by email using the contact information provided in
58 the Application Portal. If a given manufacturer account has multiple users, all users registered to the
59 account will be notified. If a manufacturer has been previously selected, only the designated
60 contact(s) from prior selections will be notified.

61 The selected manufacturer will have 10 business days from the date of notification to respond to
62 the selection email. Selected manufacturers have two options in responding: accept the selection
63 and continue with the Surveillance Testing process, or decline the selection, which will result in the
64 selected product and associated products being removed from the QPL. See section F for further
65 detail.

66 If no response is received within 10 business days, or if there is no anticipated action taken by the
67 manufacturer as determined by the DLC, the selected product and associated products will be de-
68 listed. See section F for further detail. Selected manufacturers may seek additional information
69 about the selection during this 10-day period; however, action will be taken on the 10th day of the
70 period.

71 1. Accepting the Selection

- 72 a. If the selected manufacturer agrees to move forward, the investigation will begin.
- 73 b. Accepting the selection indicates that the product can be procured within a
74 reasonable timeframe (eight weeks unless otherwise agreed upon with the DLC at the
75 time of acceptance).

76 2. Declining the Selection

- 77 a. The selected manufacturer has the option to decline to participate, which will result in
78 the product and all associated products being removed from the QPL. For further
79 information on consequences, see section F.

80 **C. Invoice and Procurement**

81 Products undergoing investigation will remain confidential between the selected manufacturer and
82 the DLC. Outside parties, including other manufacturers, end users, etc. will not have access to
83 investigation information. DLC Member utilities may have access to limited information.

84 1. Invoicing

- 85 a. After the DLC receives completed acceptance documentation, an invoice will be sent
86 to the manufacturer to cover the testing and administrative costs of the selection(s).
- 87 b. If the invoice is not paid within the allotted timeframe, the product, as well as any
88 associated products, will be removed from the QPL. See section F for further
89 information on consequences. Any issues paying within the allotted timeframe must
90 be discussed with the DLC upon receipt of the invoice.
- 91 c. Procurement information will not be sent until the invoice for that selection has been
92 paid and processed.
- 93 d. Manufacturers opting for a wire transfer must pay the fees associated with the
94 transfer of funds.

95 2. Product Procurement

- 96 a. The DLC may procure products from any number of sources, but will procure directly
97 from the manufacturer in eligible cases.
- 98 b. The number of samples required for Surveillance Testing will be equivalent to the
99 number needed in the original qualification testing, unless otherwise stated. Examples
100 include:
 - 101 i. A luminaire will require 1 sample.

- 102 ii. A 4' linear replacement lamp will require 2 samples.
- 103 iii. A 2' linear replacement lamp will require 3 samples.
- 104 3. If chosen, manufacturers are required to supply the product as it would be supplied to a
- 105 customer. It should be identical to what a customer would receive and go through the same
- 106 internal processes.
- 107 a. Samples used for testing during a prior submission may not be used for Surveillance
- 108 Testing.
- 109 b. Product prototypes or "engineering samples" may not be used for Surveillance
- 110 Testing.
- 111 4. Any components required between the mains and the product (such as a ballast for a UL Type
- 112 A linear replacement lamp, a stepdown transformer, Option B reference housing, etc.), must
- 113 also be supplied to the lab during the procurement phase by the selected manufacturer. To
- 114 minimize confusion, these should be shipped at the same time as the product.
- 115 5. Products are expected to be shipped within eight weeks of procurement information being
- 116 sent. Products expected to take more than eight weeks must be disclosed to the DLC at the
- 117 time of accepting the selection, and an explanation must be provided.

118 **D. Product Testing and Evaluation**

119 **Product Testing: Procedures**

- 120 1. Testing will be conducted only by pre-approved labs contracted by the DLC for Surveillance
- 121 Testing. Approved laboratories were determined by responding to a Request for Proposal
- 122 (RFP) issued by the DLC. Specific lab locations will be chosen for any individual investigation at
- 123 the DLC's discretion. Factors may include proximity (for shipping purposes), laboratories that
- 124 have a particular reference housing, etc.
- 125 2. The metrics to be tested will be dependent on the type of test (integrating sphere or
- 126 goniophotometer) being used.
- 127 3. Dual Mode products (UL Type A or B) will be tested using an approved ballast. The ballast shall
- 128 be sent by the manufacturer with the product, as described in section C.4.
- 129 4. Products requiring testing in a reference housing will be tested in a housing selected by the
- 130 DLC from the Approved and Pre-approved Equivalent lists (found [here](#) for retrofit kids, [here](#)
- 131 for HID replacement lamps, and [here](#) for linear replacement lamps). As qualification policy
- 132 states, a product is expected to meet the Technical Requirements in any of the approved
- 133 reference housings.
- 134 a. Alternatively, a manufacturer may provide the preferred housing for Surveillance
- 135 Testing (must be an approved reference housing). If this option is chosen, the
- 136 manufacturer is responsible for all costs associated with providing the housing.

137 5. The test lab will look for any obvious signs that the product is not performing as intended (i.e.
 138 inability to stabilize the product). The manufacturer will be notified in those cases and testing
 139 will resume once the issue has been resolved. This may necessitate procurement of new
 140 samples.

141 **Product Evaluation**

142 The DLC will evaluate every product against two tables. Table 1 is used to verify that the product
 143 meets the Technical Requirements. Table 2 is used to ensure that the product not only meets the
 144 Technical Requirements, but also lists accurate information on the QPL. A snapshot of the QPL will
 145 be taken at the time of selection, and that data will be used as a comparison to the data taken
 146 during Surveillance Testing. Any effort to update a selected product after notification will not be
 147 considered unless agreed upon with the DLC prior to the update.

148 **Table 1: Verifying the Product Meets the Technical Requirements**

Metric	Tolerance
Light output	- 10%
Efficacy	- 3%
Allowable CCT	+/- 1 ANSI bin from qualification*
CRI	- 2 points
Power Factor	- 3%
THD	+ 5%
Zonal Lumens	Refer to Table 4 of the Technical Requirements
NEMA Classification	No tolerance

149 **Defined by ANSI C78.377-2015. It is also referred to for D_{uv} and (x,y) chromaticity coordinates*
 150 *tolerances for indoor categories.*

151 **Table 2: Verifying Accuracy of QPL Product Data**

Metric	Tolerance
Light Output	- 9.6%
System Wattage	+ 12.7%
CRI	- 5.9%

- 152
- 153 1. Product spec sheets will be reviewed for potential product misrepresentation (i.e. the product
 154 qualified is different than the product received during Surveillance Testing). This may include
 155 review of spec sheets found in the marketplace. The DLC may allow for minute changes to the
 156 product – at Program Manager discretion – without a product update. This should be
 157 confirmed in writing prior to being selected.
 - 158 2. Upon completion of testing, the DLC will review the results. The established tolerances
 159 (above) will be applied to the test data to verify compliance.
 - 160 a. When reviewing against Table 1:

- 161 i. Parent products will have both the tested and reported data reviewed.
162 ii. Child products will be evaluated against reported data only.
- 163 b. When reviewing against Table 2:
- 164 i. Parent products will have both the tested and reported data listed on the QPL
165 reviewed. These products will only be considered non-compliant if they fail to
166 meet the Table 2 tolerances for both the tested *and* reported data.
167 ii. Child products will be evaluated against reported data only.
- 168 c. Products will be reviewed against the Primary Use Designation (PUD) that was
169 selected. If non-compliant, all PUDs under which the product is qualified may be
170 removed as well.
- 171 d. Some Technical Requirements are not explicitly listed in Table 1 or Table 2. These
172 include requirements such as lumens per foot, zonal lumens, or zonal efficacy. For
173 these requirements, the root metric will be examined (e.g. light output when
174 examining lumens per foot).
- 175 e. For products that were qualified using allowances, the allowance will be applied to the
176 requirement first, followed by the tolerance.
- 177 3. Upon review of the test results, the DLC will notify the manufacturer of the results with a final
178 ruling on the outcome of the testing. The outcomes are as follows:
- 179 a. The sample meets or exceeds the DLC Technical Requirements and tests within Table
180 2 tolerances: the product is considered compliant and no further action is needed.
- 181 b. The sample failed to meet the DLC Technical Requirements when using Table 1
182 tolerances: the product is considered non-compliant. See section F for consequences.
- 183 c. The sample meets the DLC Technical Requirements, but falls outside Table 2
184 tolerances: the product is considered non-compliant. See section F for consequences.

185 E. Appeals

- 186 1. The selected manufacturer will have the option to appeal the results. This process must be
187 started within five business days of receiving the results from the DLC. Any fees required to
188 investigate the appeal will be at the sole responsibility of the manufacturer requesting the
189 appeal. Appeals are only applicable to the results of testing; there is no appeal process for the
190 consequence enforced. The product(s) may be de-listed from the QPL upon failure and during
191 the appeals process. If the original ruling is overturned, the product(s) will return to the QPL
192 with the original date of qualification at the conclusion of the appeal.
- 193 2. An appeal must include:
- 194 a. Sufficient detail that addresses the reason for questioning the validity of the test
195 results, as well as a remedy to the situation.

- 196 b. Agreement to pay the fees associated with the appeal. Fees will be based on
197 administrative cost of the appeal and the fees associated with any additional required
198 testing or product procurement to resolve the appeal.
- 199 3. The following are some examples of items that will not be considered during the appeals
200 process:
- 201 a. Manufacturers indicating a change to a supplier's process.
- 202 b. The wrong product was sent.
- 203 c. Different test data on the same product with no technical justification.
- 204 4. The DLC will review the appeal and reserves the right to ask for additional information or
205 reject the appeal if sufficient information to explain the situation cannot be provided. Appeals
206 will either be:
- 207 a. Accepted: An accepted appeal may require additional product testing. If so, the
208 procedures listed above (for procurement and testing) will be repeated. Any new test
209 results will be used to make a final determination of the tested product's
210 performance.
- 211 b. Rejected: If an appeal is rejected, the original failure ruling will stand and the
212 product(s) will remain de-listed from QPL.
- 213 5. The manufacturer will be notified at the end of the appeals process as to the final results of
214 the appeal. Appeal results are final.
- 215 6. Products will not be returned to the manufacturer until the entirety of the process, including
216 appeals, has concluded.

217 **F. Consequences**

218 The following is a summary of consequences that may be implemented due to non-compliance with
219 DLC policy. Additional consequences may be imposed at the discretion of the DLC. The intent of any
220 consequence is to ensure that products that have been listed with unreliable data on the QPL are
221 subject to appropriate corrective actions.

222 **Non-Compliance Due to Product Testing**

- 223 1. The selected product fails to meet the DLC Technical Requirements using Table 1 tolerances:
- 224 a. **First instance:** A product that fails Surveillance Testing for the first time will be
225 removed from the QPL. Products associated with the failed product will also be de-
226 listed; this includes all family members (regardless of whether the selected product
227 was a parent or child product) and private labels. DLC Members will have access to
228 generalized information about products that have been removed from the QPL due to
229 Surveillance Testing.

- 230 b. **Second instance:** All first instance consequences. Additionally, the manufacturer may
231 be suspended from the DLC program for a period of up to 12 months. A suspension
232 prohibits manufacturers from submitting or qualifying any products during that
233 timeframe.
- 234 c. **Third instance:** All first and second instance consequences. Additionally, the
235 manufacturer's remaining products on the QPL, including private labels, may be de-
236 listed until compliance is assured.
- 237 2. Selected product falls outside Table 2 tolerances, but still meets DLC Technical Requirements:
- 238 a. **First instance:**
- 239 i. **Parent Product:** The manufacturer is required to update the individual
240 product on the QPL (at the full application fee), or may opt to have the
241 product de-listed. If the manufacturer chooses to update the product, [a new](#)
242 [application](#) must be submitted within 10 business days of receiving the results
243 or the associated child products and private labels will be de-listed. That
244 product family may be flagged for additional screening in a future round of
245 testing.
- 246 ii. **Child Product:** The manufacturer is required to update the individual product
247 on the QPL (at the full application fee), or may opt to have the product de-
248 listed. If the manufacturer chooses to update the product, a new application
249 must be submitted within 10 business days of receiving the results or the
250 product, as well as any associate private labels, will be de-listed.
- 251 – If a child product fails the Table 2 requirements and the data
252 demonstrates that it should become the new worst-case product in
253 the family (i.e. it should be a parent), the whole family will be de-
254 listed. The manufacturer must [submit a new application](#) to ensure
255 compliance. New model numbers are not required. The new family
256 may be flagged for additional screening in a future round.
- 257 b. **Second instance:** All first instance consequences. Additionally, the manufacturer may
258 be suspended from the DLC program for a period of up to three months.
- 259 c. **Third instance:** All first and second instance consequences. Additionally, the
260 manufacturer's remaining products on the QPL, including private labels, may be de-
261 listed until compliance is assured.
- 262 3. Selected product meets or exceeds the DLC Technical Requirements, and tests within
263 tolerances listed in Table 2 above: No action taken. The manufacturer may opt to [update the](#)
264 [product](#) at their discretion. Normal application fees will apply.

265 **Non-Compliance Outside of Product Testing**

- 266 1. Manufacturer declines to move forward with the selection:
- 267 a. **First time declining:** Selected product is de-listed. If this product is an OEM product
- 268 that has been Private Labeled, all private labels will be de-listed. If it was a parent
- 269 product, the whole family will be de-listed. Increased likelihood of another product
- 270 from the manufacturer being chosen for Surveillance Testing.
- 271 b. **Second time declining:** All first time declining consequences. Additionally, the
- 272 manufacturer may be suspended from the DLC program for a period of up to six
- 273 months, including de-listing of other products currently listed on the QPL.
- 274 2. Manufacturer misses published deadline (response to notification, invoice deadline,
- 275 procurement deadline, etc.):
- 276 a. **OEM:** The selected product will be de-listed. If it was a parent product, the whole
- 277 family will be de-listed. Any products de-listed will have their associated Private
- 278 Labeled products de-listed.
- 279 b. **Private Labeler:** The selected product will be de-listed. If it was a parent product, the
- 280 whole family will be de-listed. OEM products will not be de-listed.
- 281 c. **Multiple Missed Deadlines (OEM or Private Labeler):** All first time consequences.
- 282 Additionally, the manufacturer may be suspended from the DLC program for a period
- 283 of up to six months, including de-listing of other products currently listed on the QPL.
- 284 3. Product misrepresentation:
- 285 a. Product misrepresentation is handled on a case-by-case basis and consequences may
- 286 include product de-listings, suspensions, and/or fines.
- 287 4. Other/Miscellaneous:
- 288 a. Situations not outlined in this policy will be handled at the sole discretion of the DLC.

289 **G. Re-listing Products**

290 Products which are:

- 291 1. De-listed due to declining the selection or non-response:
- 292 a. These products may be re-submitted through [the normal application process](#) no
- 293 earlier than six months after the date de-listed. Normal application fees will be
- 294 assessed.
- 295 2. De-listed due to failing the Table 1 or Table 2 requirements:
- 296 a. These products may be submitted through [the normal application process](#) with *new*
- 297 *testing and new model numbers*. The same model number may not be used (unless
- 298 otherwise noted in section F). Normal application fees will be assessed.

- 299 b. Note that this does not apply to products that failed only the Table 2 requirements
300 and were updated within the allotted timeframe.
- 301 3. De-listed due to failing Table 1 requirements, *but* Surveillance Testing data falls within the
302 Table 2 tolerances:
- 303 a. These products may be submitted through [the normal application process](#) with new
304 testing on the model which failed to meet the requirements. Normal application fees will
305 only be assessed for any new test reports being evaluated. New model numbers are not
306 required.

307 **Safety Certification Verification**

308 In an effort to streamline the application submission process, the DLC [changed the verification process](#)
309 [for safety certification coverage](#) on March 26, 2018. (Technical Requirements V4.3). With this revision,
310 the DLC only requires a compliance certificate and statement from the manufacturer certifying that all
311 products contained therein are covered.

312 To ensure the veracity of claims made during qualification, the DLC will carry out a more in-depth
313 verification on a select number of products each year. If qualified under Technical Requirements V4.3 or
314 later, that product's safety certification will automatically be reviewed during the normal Surveillance
315 Testing process. Additionally, the DLC reserves the right to examine products for safety compliance
316 outside of the traditional Surveillance Testing process. While manufacturers will not receive explicit
317 notification of this verification, manufacturers will be notified in the event of non-compliance.

318 **Process**

- 319 1. Product is selected by the DLC, either as part of the existing Surveillance Testing Program or
320 independently.
- 321 2. The DLC sends the following information to the relevant safety organization for verification:
- 322 a. Manufacturer Name
- 323 b. Model Number
- 324 c. Unique Identifier
- 325 i. CSA: Certificate Number
- 326 ii. Intertek: Report Number
- 327 iii. UL: File Number
- 328 iv. Other: the DLC will work to identify proper documentation
- 329 3. Safety organization confirms whether or not the product is covered by the
330 certificate/report/file number provided to the DLC during qualification.
- 331 a. Note that if, after qualification, the safety documentation gets updated so that any
332 model number(s) listed on the QPL are no longer covered by the original safety

333 certificate, it is the responsibility of the manufacturer to submit the revised
334 documentation to the DLC so that the DLC records can be updated accordingly.

335 **Consequences**

- 336 1. All products sharing the family ID with the non-compliant product will be de-listed.
 - 337 a. In the event that multiple safety documents were submitted within a single family ID,
338 products will be reviewed by the DLC prior to de-listing to ensure that covered
339 products are not de-listed.
- 340 2. Non-compliant products will be referred to proper safety organization.
- 341 3. DLC Members will be provided with all products de-listed due to non-compliance.

342 **Re-Listing**

343 De-listed products may be submitted through [the normal application process](#). Several changes must be
344 made for the new application:

- 345 1. Products must be submitted with new model numbers.
 - 346 a. The manufacturer must notify the reviewer that these model numbers have changed
347 since being listed previously on the QPL.
- 348 2. Safety certification will be verified up front during the initial review, similar to the application
349 submission process prior to Technical Requirements V4.3 (i.e. a digital signature confirming
350 safety coverage will not be sufficient).
- 351 3. The appropriate safety organization must send documentation directly to DLC review staff to
352 verify coverage of all models in the application.
