

SPECIAL OFFER

ENHANCED SUPPORT TO SUBMIT LUNA ELIGIBLE PRODUCTS FOR QUALIFICATION

For a limited time, the DLC is offering manufacturers one-on-one support to review applications of currently listed SSL V5.1 products to identify the steps needed to update products to LUNA qualification.

What support will I receive?

The DLC will perform an in-depth review of the V5.1 application materials and supporting documentation to provide the manufacturer with a plan for submitting products for LUNA qualification in an update application. Manufacturers will work closely with the DLC to understand which products are eligible, what information would need to be updated, and any additional testing required.

How can I be considered for this opportunity?

We are only accepting a limited number of participants. Contact the DLC within 60 days. You must have at least one SSL V5.1 family with at least 60 [LUNA eligible](#) family members. The DLC will evaluate requests, and notify you if accepted.

Why should I participate?

Manufacturers with LUNA listed products can use the LUNA logo to identify and market that their products not only save energy, but also minimize light pollution. Participating manufacturers will also be highlighted in a DLC [press release](#) and [social media](#) promoting the newly qualified LUNA products.
